

CT COLONOGRAPHY

(Virtual Colonoscopy)

- Minimally invasive
- No sedation
- Resume normal activity immediately
- Much lower risk of colon injury
- No risk of bleeding

*Serving the
Entire Quad Cities*

Virtual Colonoscopy is *minimally invasive* and does not require any sedation. Our board certified and fellowship trained radiologists have the ability to see your entire colon – from all angles and curves. This way your entire colon is examined for lesions or polyps.

This is an excellent alternative for screening or for patients that have difficulty with optical colonoscopy, including patients with sedation or bleeding risks.

Virtual Colonoscopy is also less expensive than an optical colonoscopy and is covered by many insurance companies.

Advanced Imaging Center provides this safe test in our comfortable and discreet clinic. Your privacy is respected and our trained professional staff will take care of your needs.

***Schedule your
test today!***
